NexFlow

Sterile Filter Pipette Tips

Sterile | DNase free | RNase free | Non-pyrogenic

As stated on the rack label

Protects the pipette - the filter helps stop aerosols reaching the pipette shaft, keeping the inside of your pipette clean

Protects your samples - a clean shaft means less risk of carrying contamination over from one sample to the next

Sterile, ready to use - supplied sterile in racks, straight from the box to the pipette

DNase and RNase free - for nucleic acid work such as PCR and RNA extraction, where trace enzymes can spoil a result

Non-pyrogenic - pyrogen free, for cell culture and other endotoxin-sensitive work

Longer reach - TF-1000B-RS reaches into narrow necked bottles and deep tubes while the pipette stays clear of the rim

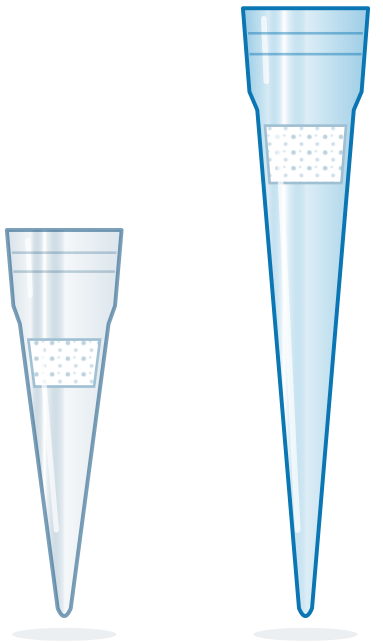

Load without touching a tip - tips stand upright in the rack; press the pipette straight down to load, and see what is left through the clear lid

Easy identification - colour coded racks: blue for 1000 µL, pink for 200 µL

Traceable racks - every rack is labelled with product code, lot number and expiry date for QA records and audits

Local supply and support - supplied by FMCG Industry Solutions from Caringbah, NSW
